Islamabad, Pakistan

PROFESSIONAL SUMMARY

Data Science student and aspiring Business Intelligence Analyst with strong analytical thinking and hands-on experience in Python, machine learning, and data analytics. Proven ability to build automated data pipelines, engineer predictive models, and solve complex problems using data-driven approaches. Passionate about leveraging advanced analytics and automated workflows to extract actionable insights and optimize business processes.

EDUCATION

FAST NUCES

Bachelor in Data Science

Islamabad, Pakistan

2024 – 2028

EXPERIENCE

Lab Demonstrator - Data Structures

FAST NUCES

Jan 2026 – Present

Islamabad, Pakistan

- Instruct students on core data structures and algorithms, focusing on algorithmic efficiency, data optimization, and analytical problem-solving.
- Mentor peers in building strong foundations for data science through practical coding sessions and logic building.

TECHNICAL PROJECTS

n8n Workflow Automation & Data Pipelines | *Docker, n8n, Pinecone, Gemini*

- Architected and configured a self-hosted n8n environment using Docker to build and test robust automation workflows.
- Designed automated data pipelines to curate information and integrated Retrieval-Augmented Generation (RAG) agents utilizing Gemini and Pinecone to enhance data retrieval and analysis.

Housing Price Prediction Model | *Python, Scikit-learn, Pandas, EDA*

2025

- Built a regression model to predict property prices using Islamabad real estate data, performing extensive EDA, data cleaning, and outlier handling.
- Engineered features and evaluated Linear Regression, Ridge, and Lasso techniques, optimizing performance via RMSE and R^2 scores.

Movies Data Manager | *C++, Hash Tables, DBMS*

- Engineered a high-performance database management system optimizing data storage and retrieval.
- Implemented custom data structures and Hash Tables for efficient search, insertion, and deletion operations.

TECHNICAL SKILLS

Languages: Python, SQL, C++

Data Analytics & BI: Exploratory Data Analysis (EDA), Predictive Modeling, Data Analytics, Pandas, NumPy, Scikit-learn

Tools & Frameworks: n8n, Docker, Pinecone, RAG Architectures, Matplotlib, Seaborn, Git
